

# STULP – Support Tool for University Lecture Planning

| Zeit  | Montag             | Dienstag                         | Mittwoch        | Donnerstag    | Freitag     |
|-------|--------------------|----------------------------------|-----------------|---------------|-------------|
| 7-9   |                    |                                  |                 |               |             |
| 9-11  | Analysis           |                                  | RA<br>C1        |               |             |
| 11-13 | Modellierung<br>L1 | Modellierung<br>L1               | ITS - ZÜ<br>??? | Analysis      | GP+PS<br>L1 |
| 13-14 | BuK - ZÜ<br>L2     | SE - ZÜ (C1)<br>GP+GPS - ZÜ (L1) | ITS<br>???      | Analysis - ZÜ | Stochastik  |
| 14-16 | BuK ??<br>L2       | GP+PS<br>L1                      | GP+PS<br>L1     | BuK<br>C1     |             |
| 16-18 |                    |                                  | Stochastik      |               |             |

Requirements to be met:

- Check for completeness of offered lectures
- Map all lectures to time slots and to rooms
- Check for conflicts and re-plan
- Generate plans for different purposes
- Consider different student groups, e.g.
  - CS 1<sup>st</sup> year with minor math, CS 2<sup>nd</sup> year with minor economy, ...

# Checking for conflicts of mandatory courses

Check for each student group:

- Are all mandatory lectures offered and planned?
- Do mandatory lectures offered for any student group overlap?

# Are teachers booked for overlapping lectures?

| Zeit  | Montag             | Dienstag                         | Mittwoch        | Donnerstag    | Freitag     |
|-------|--------------------|----------------------------------|-----------------|---------------|-------------|
| 7-9   |                    |                                  |                 |               |             |
| 9-11  | Analysis           |                                  | RA<br>C1        |               |             |
| 11-13 | Modellierung<br>L1 | Modellierung<br>L1               | ITS - ZU<br>??? | Analysis      | GP+PS<br>L1 |
| 13-14 | BuK - ZU<br>L2     | SE - ZU (C1)<br>GP+GPS - ZU (L1) | ???             | Analysis - ZU | Stochastik  |
| 14-16 | BuK ??<br>L2       | GP+PS<br>L1                      | GP+PS<br>L1     | BuK<br>C1     |             |
| 16-18 |                    |                                  | Stochastik      |               |             |

| Zeit  | Montag             | Dienstag                         | Mittwoch        | Donnerstag    | Freitag     |
|-------|--------------------|----------------------------------|-----------------|---------------|-------------|
| 7-9   |                    |                                  |                 |               |             |
| 9-11  | Analysis           |                                  | RA<br>C1        |               |             |
| 11-13 | Modellierung<br>L1 | Modellierung<br>L1               | ITS - ZU<br>??? | Analysis      | GP+PS<br>L1 |
| 13-14 | BuK - ZU<br>L2     | SE - ZU (C1)<br>GP+GPS - ZU (L1) | ???             | Analysis - ZU | Stochastik  |
| 14-16 | BuK ??<br>L2       | GP+PS<br>L1                      | GP+PS<br>L1     | BuK<br>C1     |             |
| 16-18 |                    |                                  | Stochastik      |               |             |

- do multiple lectures planned for a professor overlap?
- do lecture times overlap with other duties?
- do we have enough non-overlapping exercise time slots for student teachers?

# STULP - Avoiding weak conflicts

| Zeit  | Montag             | Dienstag           | Mittwoch       | Donnerstag           | Freitag      |
|-------|--------------------|--------------------|----------------|----------------------|--------------|
| 7-8   |                    |                    |                |                      |              |
| 9-11  | Analysis           |                    | IA<br>21       |                      |              |
| 11-13 | Modellierung<br>L1 | Modellierung<br>L1 | IB - 20<br>111 | Analysis<br>L1       | GP-IPS<br>L1 |
| 13-14 | IA - 20<br>111     | GP-IPS - 20 (S.1)  | IB<br>111      | Analysis - 20<br>111 | Mathematik   |
| 14-16 | Mathematik         | GP-IPS<br>L1       | GP-IPS<br>L1   | GP-IPS<br>L1         |              |
| 16-18 |                    |                    | Mathematik     |                      |              |

Does the plan unnecessarily restrict choices?

- e.g., avoid conflicts of courses in same focus area
- e.g., avoid conflicts of mandatory courses with optional courses
- plan exercises, such that there are good choices
- regard majors and minors

Find a good work load balance during the week for all lecturers  
and for all student groups (CS 1<sup>st</sup> year with minor math, ...):

- e.g. distribute work load equally during the week
- regard time to change lecture rooms (e.g. Fürstenallee/Campus)
- minimize needed daily travel between Fürstenallee and Campus
- avoid unnecessarily long gaps between lectures

# STULP – Simplify and minimize re-planning

| Zeit  | Montag             | Dienstag                         | Mittwoch        | Donnerstag    | Freitag     |
|-------|--------------------|----------------------------------|-----------------|---------------|-------------|
| 7-9   |                    |                                  |                 |               |             |
| 9-11  | Analysis           |                                  | IK<br>L1        |               |             |
| 11-13 | Modellierung<br>L1 | Modellierung<br>L1               | ITS - ZU<br>ITS | Analysis      | GP+PS<br>L1 |
| 13-14 | BuK - ZU<br>ZU     | BE - ZU (ZU)<br>GP+GPS - ZU (L1) | ITS<br>???      | Analysis - ZU | Stochastik  |
| 14-16 | BuK ZU<br>ZU       | GP+PS<br>L1                      | GP+PS<br>L1     | BuK<br>ZU     |             |
| 16-18 |                    |                                  | Stochastik      |               |             |

Improve course collection

Re-use of previously offered lectures and previous plans

Support last-minute changes of plans, e.g. because of

→ additional or cancelled lectures

→ too small rooms

→ last-minute time changes

# STULP – Collaborative and distributed planning

Help to coordinate distributed planning:

- different plan owners plan autonomously
- different planning time frames
- different planning goals
- different planning strategies
- different planning tools

Distributed planning has to share common resources / groups:

- lecture rooms
- lecturers
- multiple different student groups, e.g.
  - CS 1<sup>st</sup> year with minor math, CS 2<sup>nd</sup> year with minor economy, ...

# STULP – Flexible planning

Make planning process flexible,  
i.e. be open to

- new student groups
- new versions of module handbook
- multiple regulations in parallel  
(e.g. old ECTS system and new ECTS system)
- changes in cooperation model between plan owners

# STULP – Needed skills and requirements

Needed skills:

→ very good programming experience

(this PG focuses on programming)

→ deep understanding of the Java language

→ experience with software design and efficient programming

→ knowledge of relational database systems

| Zeit  | Montag             | Dienstag           | Mittwoch        | Donnerstag    | Freitag     |
|-------|--------------------|--------------------|-----------------|---------------|-------------|
| 7-8   |                    |                    |                 |               |             |
| 9-11  | Analysis           |                    | IK<br>04<br>01  |               |             |
| 11-13 | Modellierung<br>L1 | Modellierung<br>L1 | ITS - ZU<br>077 | Analysis      | GP+PS<br>L1 |
| 13-14 | IK - ZU<br>L1      | GP+PS - ZU (L1)    | ITS<br>777      | Analysis - ZU | Backpack    |
| 14-16 | GP+PS<br>L1        | GP+PS<br>L1        | GP+PS<br>L1     | IK<br>01      |             |
| 16-18 |                    |                    | Heureka         |               |             |

Knowledge of web server/client programming is an advantage

(although not required)

Requirements:

→ develop, test and deliver software

→ self-study and present software development / technologies

→ join all meetings (weekly – except holidays, exact dates t.b.a.)
