A SYSTEMATIC LITERATURE REVIEW ON CROWDSOURCING PROBLEMS

PROF. DR. GREGOR ENGELS, DATENBANK-UND INFORMATIONSSYSTEME

Motivation

Crowdsourcing is a process of requesting a large pool of people for solving existing tasks using web-based platforms. We aim to carry out an in-depth study into the crowdsourcing problems in order to categorize and to summarize the current status of the literature on this topic. The research method should follow a systematic literature review approach. This topic is a research-based topic without any need for implementation.

Requirements

• Good English skills
• Experience with research
• Interactive and motivated student
• Flexible for having two meetings every month

Task description

• Comparison of different systematic literature review methods
• Choosing one of the methods with explanation and doing the research according to that
• Forming a comprehensive categorization of the existing problems together with the detailed description
