A SYSTEMATIC LITERATURE REVIEW ON DATA ANALYSIS ON CROWDSOURCING PROBLEMS

Motivation
Crowdsourcing is a process of requesting a large pool of people for solving existing tasks using web-based platforms. We aim to carry out an in-depth study into the crowdsourcing platforms in order to categorize the existing platforms. Besides, the data analyses, which are conducted on the existing platforms, need to be studied and reported. The research method should follow a systematic literature review approach. This topic is a research-based topic without any need for implementation.

Requirements
- Good English skills
- Experience with research
- Interactive and motivated student
- Flexible for having two meetings every month

Task description
- Comparison of different systematic literature review methods
- Choosing one of the methods with explanation and doing the research according to that
- Forming a comprehensive categorization of the existing platforms
- Forming a comprehensive categorization of the data analysis performed on the platforms with all detail description
